

Latif AI - Business Project

Introduction

Latif AI is an AI-powered human clone business that provides virtual assistants capable of replicating human voice, text, and facial features. This project aims to create a smart, secure, and user-friendly AI system with advanced features.

Features

1. Virtual assistant capabilities
2. Human-like voice and text replication
3. Face replication (Deepfake/Avatar system)
4. Ability to attend calls and meetings
5. Secure and flexible payment system (UPI, Crypto, Cards)
6. High-level security to prevent hacking
7. Option to update Trust Wallet and UPI ID anytime

App Development Steps

1. Plan the UI/UX design for the app.
2. Set up the backend with AI models and security protocols.
3. Develop the frontend with React/Next.js.
4. Integrate voice, text, and face replication systems.
5. Implement the payment system.
6. Conduct security testing and optimizations.
7. Deploy the application on Vercel or Netlify.
8. List the app on the Play Store and market it.

Deployment

Once development is completed, the app will be deployed on Vercel or Netlify. The Play Store listing will follow after thorough testing.
